ONE PIECE MOLDED FIBERGLASS BAPTISTRIES

Optional plexiglass window gives beauty and strength. A full 1/2" in thickness, will not yellow or craze. Tough, permanent seal eliminates leaks. All baptistries shown with window fronts. Any model (except 401W) may be ordered without window (designate model desired, omitting the "W" from the model number).

Wide range of baptistry models helps you select a size and shape to utilize available space effectively.

We are ready to help! Please write or call for further information.

BAPTISTRY HEATING SYSTEMS

208 - 240 VOLTS:
ALL SYSTEMS

External Mount Water Heater

This is the recommended electric circulation baptistry heating system. A built in thermostat maintains any preset temperature, while the 230 volt water circulation pump provides even temperature and increases the efficiency of the heater. The heater and pump are wired in parallel, allowing them to operate simultaneously. Heaters available in 3, 5, or 6KW, 230 volt, single phase, UL, NSF.

Over-the Side Heater

The Over-the-Side Heater is a complete, self-contained, thermostatically controlled water heater. This portable unit operates on 230 volt current and is equipped with thermostat, and on-off light. The 40" element extends into the water, and has adjustable stainless steel mounting brackets. 6KW, 230 volt, single phase, UL, NSF.

While considering the purchase of a baptistry, one should examine several important features that are sometimes overlooked. Costly mistakes are often discovered too late. After the unit has arrived on the job site is not the time to re-order the proper baptistry.

Examine our product and prices closely. A quality baptistry is not cheap, but few churches want a cheap product!
